

Specialist Healthcare Seating Range

Support | when you need it the most.

Support | for your client

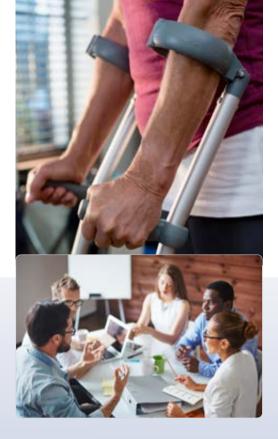

Primacare have a broad range of innovative products for your client, to provide comfort and support over a long period of time if necessary.

With such an extensive range of products there must be a suitable chair because we start with simple porter chairs and ultimately offer chairs for users with the most complex needs.

Support | for you the professional

A range of practical support to help you understand, specify and introduce our products.

Whether you are a Specialist Seating assessor, an Occupational Therapist, a Tissue Viability expert or an interested carer, this brochure is a starting point to explain the functions and sizes of the chairs available. In addition, the extensive range of seating solutions including pressure management and the large number of accessories and options will allow you to fully specify the correct chair.

Support when you need it the most

Specialist Healthcare Seating Range

Primacare are excited to show you our latest range of Specialist Seating products.

We have now produced over 100,000 chairs and this experience is evident in the quality of manufacturing and the flexibility and functionality of the designs shown.

Our primary aim is to balance the challenges of comfort and pressure management with posture control and individual independence. The result is this new range of chairs, from the relatively simple design up to the most complex needs.

Pressure Management

Many people discuss 'Comfort' and 'Pressure relief' and the subjects are inextricably linked.

If we can increase an individual's surface area contact between themselves and their chair then we spread their weight over a larger area. This helps to reduce the pressure on their body parts, including legs, bottom, arms and backs.

It is therefore CRITICAL to use a chair that has been measured and adjusted to the

size and shape of the individual. Correct Posture leads to maximising the contact area which in turn minimises pressure on the body parts.

Occupational Therapists and Specialists will advise repositioning every 2 hours and the use of significant tilt angles (up to 45 degrees) which can achieve

pressure reductions particularly in the pelvic area. However the highest pressure is found in the seating cushion area under the bottom and Primacare have 7 different seating arrangements to offer depending on the level of risk of pressure sores and ulcers.

Pressure management mapping

Primacare different seat cushion options have all been extensively tested using a pressure mat which contains 120 different pressure sensors over the seating area of a chair. Pressure Mapping is unique to the individual user, the type of cushion and the relative position of the chair.

However, the mapping can give relative performance and a pressure map when comparing different cushions with the same user.

Please note that users with pressure relief concerns should seek the advice of an Occupational Therapist or Tissue Viability Specialist who can advise on the level of Pressure Relief required.

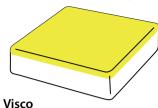

Female 9 stone Age 52 CoolGel Cushion

Male 15 stone Age 50 Primagel Cushion

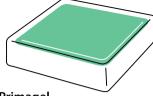

Pressure management seat options

Medium Risk

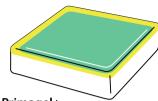

The Visco elastic heat sensitive layer is supported by high density Reflex foam.

Body heat moulds the visco layer around any high pressure areas and the result is a stable cushion giving good postural support.

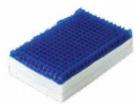

Primagel High Risk

The cushion uses combustion modified high resilient foam with a profiled upper surface to increase pressure distribution, encasing a silicon gel sac, which dissipates pressure in high areas of loading.

Primagel+ High Risk

The Primagel+ cushion uses the Primagel cushion with an added layer of visco elastic heat sensitive foam.

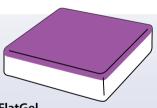

FormAlign P7 Gel High Risk

FormAlign P7 offers high level pressure care for porter and static day care seating options.

With the clever integral shear-reducing design, the P7 maintains a good stable posture whilst ensuring good quality pressure relief.

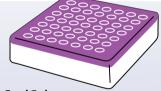

The innovative gel and gel/foam layers effectively manage pressure with enhanced immersion qualities.

FlatGel High Risk

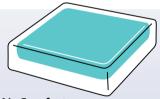

The FlatGel cushion uses a Proprietary Silicon Polymer sheet over a high density reflex foam. The Gel has the same physical characteristics as human fat tissue and the softness stays unchanged at any temperature. The polymer is a solid which will not leak if punctured. It is Hypoallergenic – it does not contain latex or isocyanates and it is odourless.

Because of its stability with temperature changes this cushion offers excellent constant postural support over many hours.

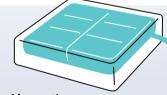

CoolGel High / Very High Risk

The CoolGel cushion uses a Proprietary Silicon Polymer sheet over a high density reflex foam. The Gel has the same physical characteristics as human fat tissue and the softness stays unchanged at any temperature. The polymer is a solid which will not leak if punctured. It is Hypoallergenic – it does not contain latex or isocyanates and it is odourless. The CoolGel has circular discs of polymer which allows air to circulate between the cells to minimise heat and moisture build up. An even pressure distribution contours to the underlying surface so this cushion can be used all day and still retain its stability.

Air Comfort High / Very High Risk

The Air Comfort cushion uses a combination of longer broad rubber webbing springs with a high density reflex foam seat cushion. This cushion surrounds an air cell which allows different air pressures and air volumes. This cushion easily contours around the higher protruding parts of the posterior to give an excellent even pressure distribution.

Alternating Air Cushion

High / Very High Risk

The alternating air cushion uses an air pump to continuously inflate and deflate 6 dynamic air cells controlled on a 9 minute 36 second cycle.

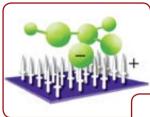

At any one time 4 of the cells are inflated bringing pressure relief to the other areas. A 240V electrical supply is required for the pump which is usually positioned next to the chair.

Primacare can offer designs of chair which have fewer areas that harbour germs and viruses and these are featured on pages 50 and 51. We can also offer an optional range of anti-microbial fabrics and vinyl fabrics which are fast acting, effective and durable. They are proven to be effective against Coronavirus.

Key Features & Benefits

- Bonded Resilient to high temperatures and rigorous washing
- Permanent Durable for the useful life of most products
- No migration Won't leach into the environment or skin
- Variety of end uses Can be applied to varying weight based cloths
- Active hygiene Controls the development of dust mites
- Tried and tested No arsenic, heavy metals or polychlorinated phenols
- Not a chemical poison More than 30 years in the market
- Mechanical deactivation Does not induce microbial mutation or bioaccumulation
- Effective quality control Simple test available to detect anti-microbials
- Unmatched safety profile Not harmful to humans or the environment
- Odourless and colourless

How it works

Negatively charged micro-organisms are attracted onto the positively charged molecular coating of Shieldplus.

Cell wall is pierced, killing the microbe and preventing growth and proliferation.

Shieldplus provides a safe and optimal anti-microbial protection, even after frequent cleaning.

Monza Infection Control

The Monza Infection Control chair uses waterproof vinyls and vapour permeable fabrics but all the back cushions and seat and leg quilt are attached with magnets.

There is no Velcro used in the manufacture so all the surfaces behind the cushions are quickly accessible and easily cleaned.

- Removable double seat cushion
- Manually adjusted seat angle with 4 positions (max 28°)
- · Seat depth adjustable
- · Pull out footplate
- 4 x swivel 4" diameter castors (2 x rear locakable)
- Ulitima vinyl outer Crib 5
- VP 4 way stretch fabric on seat and back cushions

Two section seat cushion, a 4" thick and 2" thick which allow the chair to have 2 different seat heights. The chair can also be specified with any of the Pressure reducing cushion options

The seat rake angle can be adjusted with quick release plunger pins to give seat angles up to 28 degrees rake

The chair comes as standard with 4" of seat depth movement, easily adjusted by 2 knobs on the underside of the seat

The pull out footplate gives a comfortable position to rest the feet when using as a Porter chair

The Back Angle Recline is operated by a handle which has a safety catch on the lever to help avoid accidental use of the recline function. The sturdy push handle can be positioned at 2 heights

An optional footstool is available to create a comfortable relaxed seating position

Alpha

The Alpha chair is an inexpensive solution to Portering needs but with many adjustable features to make this a comfortable all day chair.

The chair has adjustable seat depth, seat rake angle and back rest recline. The chair comes in 2 widths (18" and 20") with a double seat cushion as standard, allowing simple seat height adjustment.

The cushion materials are 4 way stretch vapour permeable fabric which is washable up to 95°C. The use of VP fabric enables the chair to be optionally upgraded with different pressure relieving cushions.

Adjustable back cushions

The chair comes as standard with 4" of seat depth movement, easily adjusted by 2 knobs on the underside of the seat

- VP 4 way stretch fabric on seat and back cushions

An optional footstool is available to create a comfortable relaxed seating position

Alpha Plus

The Alpha Plus is a supportive chair that reclines from a pivot point behind the knee.

This reclining seat is controlled by a smooth powerful gas spring which allows infinite positioning and a steep seat rake if necessary. It promotes a sense of security and relaxation.

The chair has adjustable seat depth and comes in 3 different widths. The chair seat cushion comes with visco pressure relieving foam as standard.

The cushion materials are 4 way stretch vapour permeable fabric which is washable up to 95°C. The use of VP fabrics enables the chair to be optionally upgraded with different pressure relieving cushions.

Affinity *Air Comfort* | specification.

Affinity *Air Comfort* | features and options.

The Standard Affinity Air Comfort chair uses Single or **Dual Tilt in Space Riser actions** with a 20 stone weight capacity. Bespoke sizes and actions with Variable Angle Lift(VAL) are available at extra cost

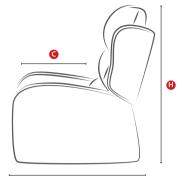

10

The Affinity chair shown has the high leg lift Tilt in Space actions but it can be specified with a conventional dual action which gives individual control of the legrest and back rest but with no tilt

- · Available with Single or Dual Tilt in Space rise and recline actions
- · Ultimate vinyl outer Crib 5 with vapour permeable 4 way stretch fabric on all contact surfaces
- · Extra long springs for added comfort
- · Air cells in seat and back cushions provide infinite pressure adjustment

The 3 air cells are easily adjusted using the Hand held inflation bulb

Affinity *Air Comfort*

The Affinity Air Comfort chair has been designed with maximum comfort in mind.

To achieve this there is a special seat construction with extra long springs to give more bounce. The seat and back cushions are made up with 3 individually controlled air cells to allow the occupant to personalise the comfort. The chair contact surfaces use 4 way stretch vapour permeable fabric which adds to the comfort of the chair.

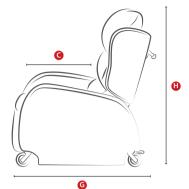

This combination of long springs, soft foam, air cells and stretch fabric have been proved with pressure mapping to classify this seating as high risk.

Optional electrically operated seat retraction which gives 6" seat depth adjustment

The Bariatric chair shown on this page is the Snowdon style chair. It is possible to make any style of chair using the Bariatric 40 and 50 stone BLTR actions

Snowdon BLTR

Bariatric

The Snowdon Bariatric Chair has a choice of weight capacities - 25, 35, 40 and 50 stone, and uses the strong and reliable BLTR actions.

This gives the user separate control of the Back angle, Legrest, Tilt and Rise functions of the Porter chair.

The chair is designed with a low construction height which allows for thick seat cushioning for extra comfort and longevity.

The removable seat system allows the provision of all of the pressure management solutions shown on page 3.

G

The chair can be raised 4" vertically

Affinity Bariatric Porter

The Affinity Bariatric Porter has a weight capacity of 40 or 50 stone and uses the reliable BLTR actions.

This gives the user separate control of the Back angle, Legrest, Tilt and Rise functions of the Porter chair.

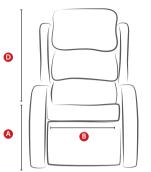

With chairs of this weight capacity the portering aspect is to allow the chair to be moved around without the user in the chair. It would be very difficult for 2 carers to move the chair with a 50 stone occupant.

Florence Level 4 Care Chair

The Florence chair is a multi-positional, multiadjustable chair which can accommodate over 90% of the population.

The Florence is available as a fully manual chair operated by levers and gas springs, or each of the functions can be operated electrically with the control by a handset.

As such, the chair is suitable for those with complex needs and suitable for home, nursing and residential environments.

The Florence can also be ordered in any technical fabric for the outer but we recommend the use of 4 way stretch fabric on all the cushioning to maintain the integrity of any pressure relief and not to compromise the comfort of the chair.

Additional options provide excellent postural support and pressure management making the Florence a class leading chair.

Contract Express chairs

Both chair styles come in 3 sizes, 3 colour ways and 3 action types and can be delivered very quickly.

The action types available are single Tilt in Space, Dual Motor and Dual Tilt in Space, all with a 20 stone weight capacity.

Both chairs come as standard with fabrics to Crib 5 standard allowing their sale to and use in Care Homes and Hospitals.

Both chairs come with a removable seat system and 3 waterfall back cushions which can easily be adjusted to improve the comfort of the chair. Medium risk pressure relief foam is supplied as standard but the chairs can be specified with all pressure management options listed at the front of the brochure.

Monza Contract Express

Monza arm is narrower at the base allowing easier access for hoists and steadies
